The Holophone surround sound microphone system is ideal for recording and mixing. Surround sound recorded with the Holophone system is more realistic, providing multi-channel audio-encoding processes - Dolby AC-3, DTS, and Circle Surround.

The unique feature of the Holophone for broadcasting lies in its ability to record at home. With the Holophone there is no need to mix the ambiance of a live event in real time. Simply figure out placement, plug the Holophone in...and you are there!
Broadcasting

We have used the Holophone on a number of high profile television and HDTV broadcasts over the past decade. For more detailed information and pictures from some of the events we have worked on, please visit Holophone In Action.
