Feb. 01 2006

The Holophone H2-PRO made its first appearance for The Canadian Broadcast Corporation’s (CBC) broadcast of NHL Hockey Night in Canada. A Saturday night institution in Hockey-Crazy Canada.

The Mic was placed at the first camera position at center ice and provided the main surround ambience for the 5.1 and Lt/Rt feed.

The H2-PRO provides the three dimensional feeling of being "at the game" and this broadcast was no exception, providing millions of viewers the opportunity to feel like they were there from the comfort of their home theater; without the parking problems and line-ups at the concession stands.

Virtual Sports comes to life....

stay tuned to www.holophone.com for more NHL Hockey updates......
